DRILLING SIZES

You will need to complete a series of drilled holes for the grinding mechanism. The diagrams opposite detail the drilled holes for each mill including the width and depth of each hole.

IMPORTANT NOTE:

The mills share the same drilling diameters but note that second hole in the PEPPER MILL is drilled 5mm deep (the salt mill is drilled 3mm).

TURNING SIZES

Below are the templates for the classic salt and pepper mill shape.

PLEASE NOTE:

If making the 300mm kit, the cap section remains the same size (45mm) and the body section will be 255mm.

TEMPLATE FOR 175mm KIT

Actual size.

TEMPLATE FOR 300mm KIT

Actual size.

ASSEMBLY

Please note: The bottom plate (G) must be positioned facing the correct way up so the grinding part of the mill (A) sits against it and can be pulled up, against the spring, for finer grinding.
